OBSIDIAN INTERNATIONAL

Find a problem worth solving.

Capture evidence before you choose what to build.

01 / Who are you helping?

Name a specific group, situation and task. Avoid "everyone".

02 / What keeps getting in their way?

Describe the obstacle in their words. When and how often does it happen?

03 / What evidence do you have?

Record sources, dates, examples and current workarounds. Separate facts from guesses.

04 / What will you check next?

Choose one conversation or observation that could challenge your idea.

A useful signal: people already spend time, effort or money trying to solve it.

Shape one small offer.

Choose a useful outcome that you can deliver honestly.

01 / The before and after

I help [person] go from [problem] to [specific outcome] with [resource].

02 / What is the smallest useful version?

Choose a guide, checklist, template or spreadsheet. List exactly what is inside.

03 / What makes it usable?

Note the format, software, instructions, examples and limits. What is not included?

04 / How will someone judge it before buying?

Plan a preview and a clear description. Write a test price and why it is reasonable.

Make the promise smaller if you cannot show how the resource delivers it.

Run a seven-day experiment.

Test the problem and offer. Keep the workload small enough to finish.

My hypothesis:

My success signal and decision date:

DAY	ACTION / WHAT I LEARNED
01	
02	
03	
04	
05	
06	
07	

Review the evidence, not just the views.

What happened? What remains uncertain? Continue, change the offer, or stop?
